

Hosting a Website with Azure Virtual Machine

Step 1: Log into Azure and search for Virtual machine and open it.

Step 2: Click on create and choose the first option

Step 3: Fill in the necessary information in the basics section, then click on next to discs section.

The screenshot shows the 'Create a virtual machine' page in the Azure portal, specifically the 'Project details' section. The page is titled 'Create a virtual machine' and includes a search bar and navigation links. The 'Project details' section contains the following fields and options:

- Subscription:** Azure subscription 1
- Resource group:** (New) website-v_group
- Virtual machine name:** website-vm
- Region:** (US) West US 3
- Availability zone:** Availability zone
- Zone options:**
 - ☒ Self-selected zone (Choose up to 3 availability zones, one VM per zone)
 - ☐ Azure-selected zone (Preview) (Let Azure assign the best zone for your needs)
- Availability zone:** Zone 2

At the bottom of the section, there are navigation buttons: '< Previous', 'Next: Disks >', and 'Review + create'. A 'Give feedback' link is also present.

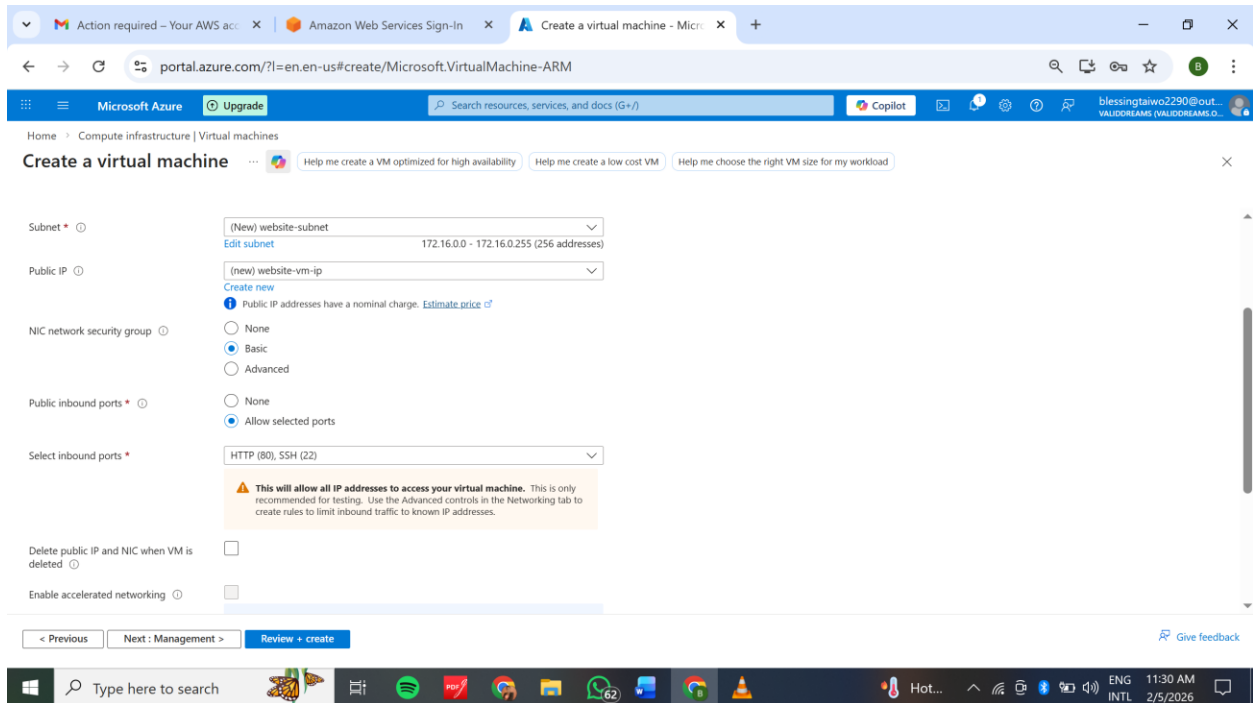

Step 3: Fill in the necessary information in the disc section, then click on next to networking section.

The screenshot shows the 'Create a virtual machine' page in the Azure portal, specifically the 'OS disk' section. The page is titled 'Create a virtual machine' and includes a search bar and navigation links. The 'OS disk' section contains the following fields and options:

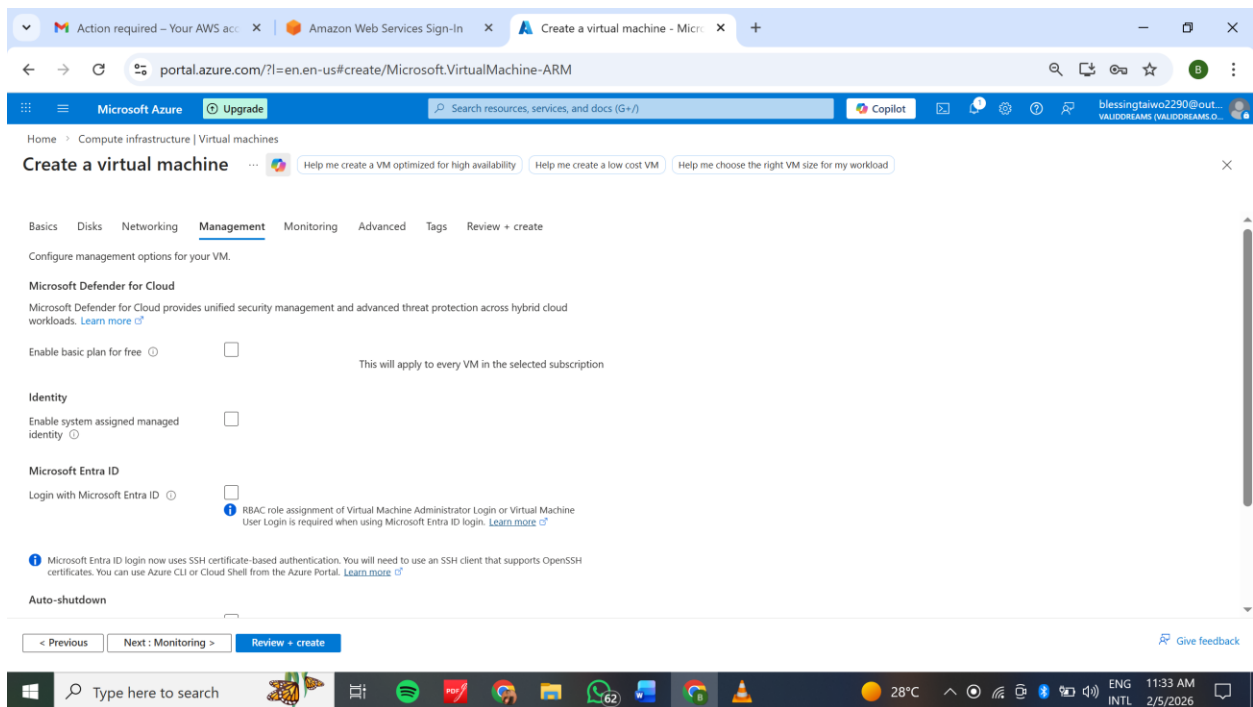

- OS disk size:** Image default (30 GiB)
- OS disk type:** Premium SSD (locally-redundant storage)
- Delete with VM:** ☒
- Key management:** Platform-managed key
- Enable Ultra Disk compatibility:** ☐

At the bottom of the section, there are navigation buttons: '< Previous', 'Next: Networking >', and 'Review + create'. A 'Give feedback' link is also present.

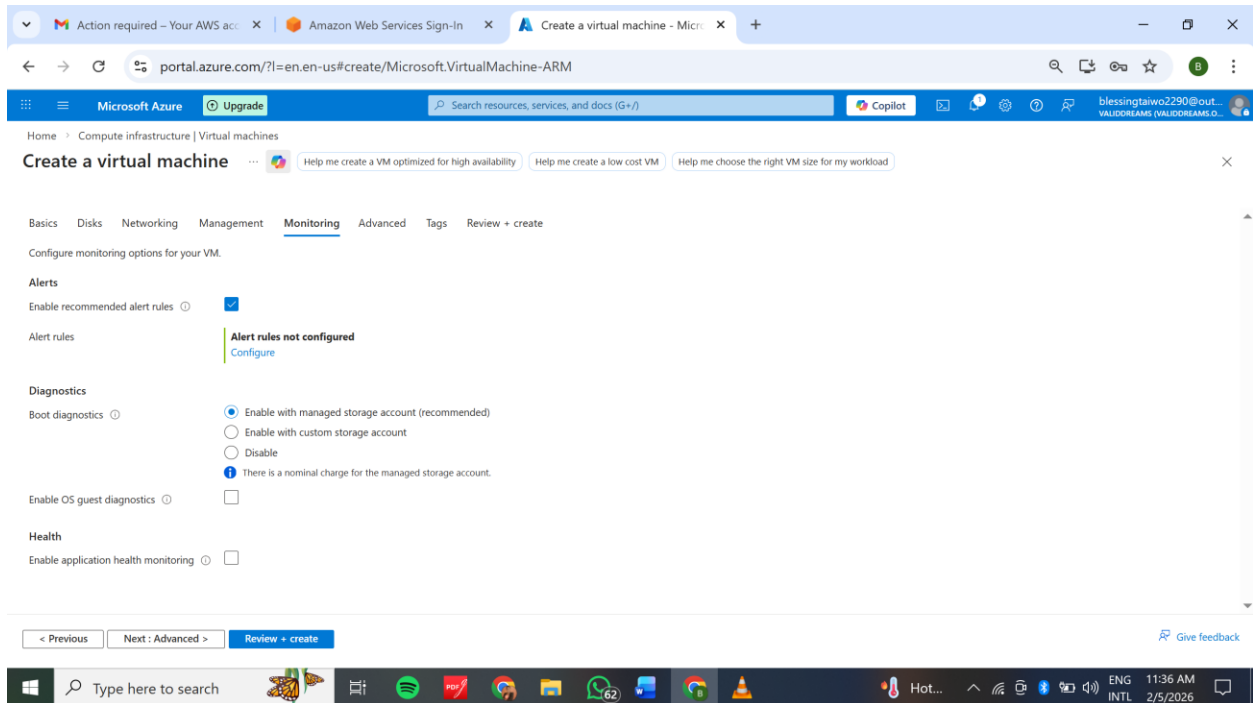

Step 3: Fill in the necessary information in the networking section, then click on next to management section.

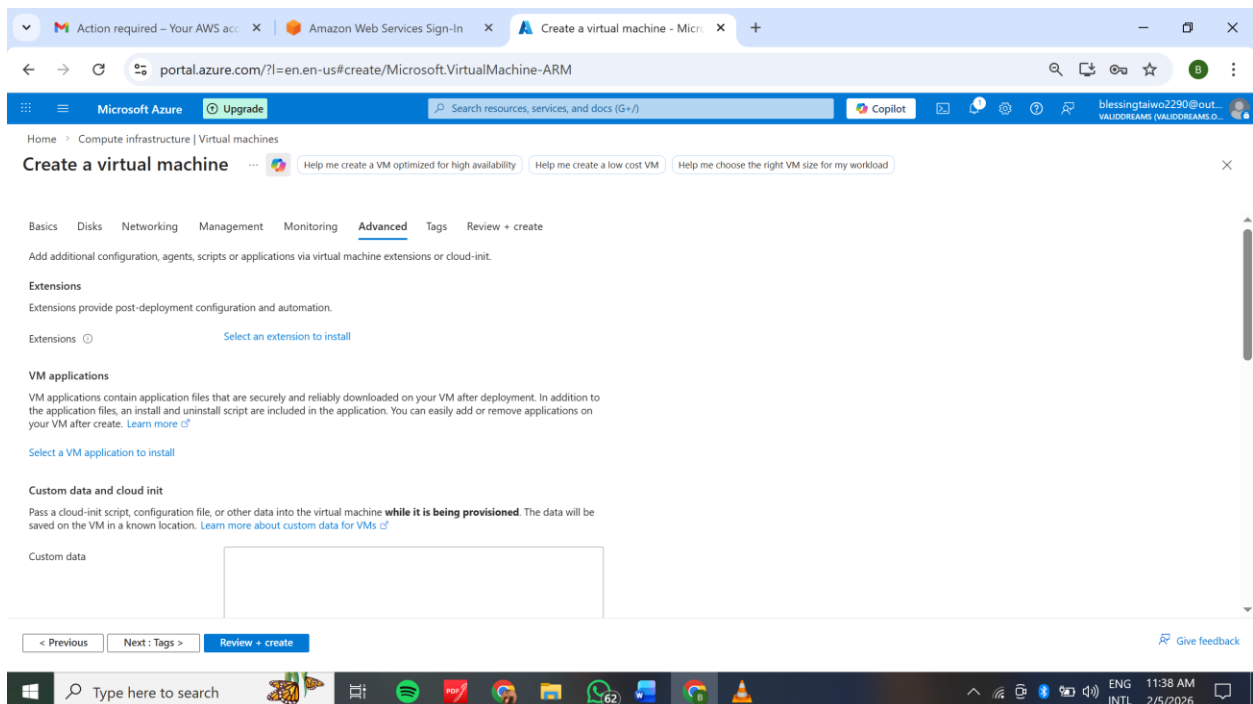

Step 3: Fill in the necessary information in the management section, then click on next.

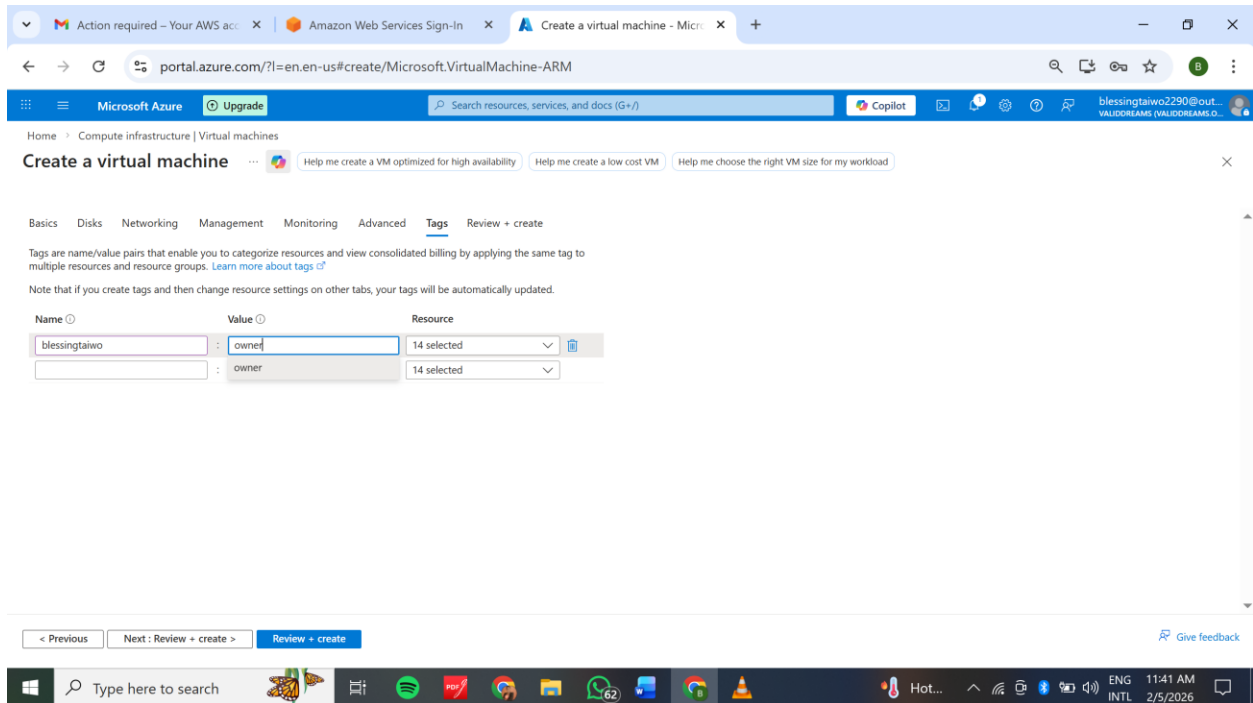

Step 7: Fill in the necessary information in the monitoring section, enable alert ails and decide on health cost, then click on next.

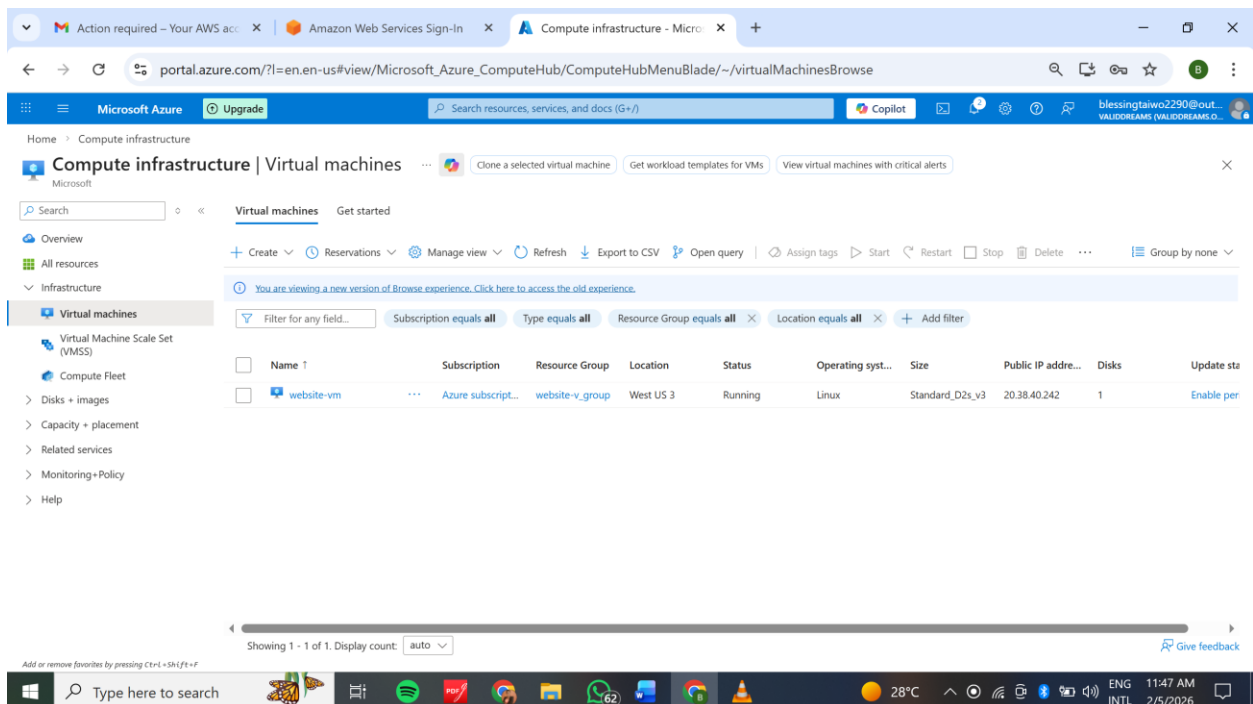

Step 8: Fill in the necessary information in the advanced section, or leave it at default settings, then click on next.

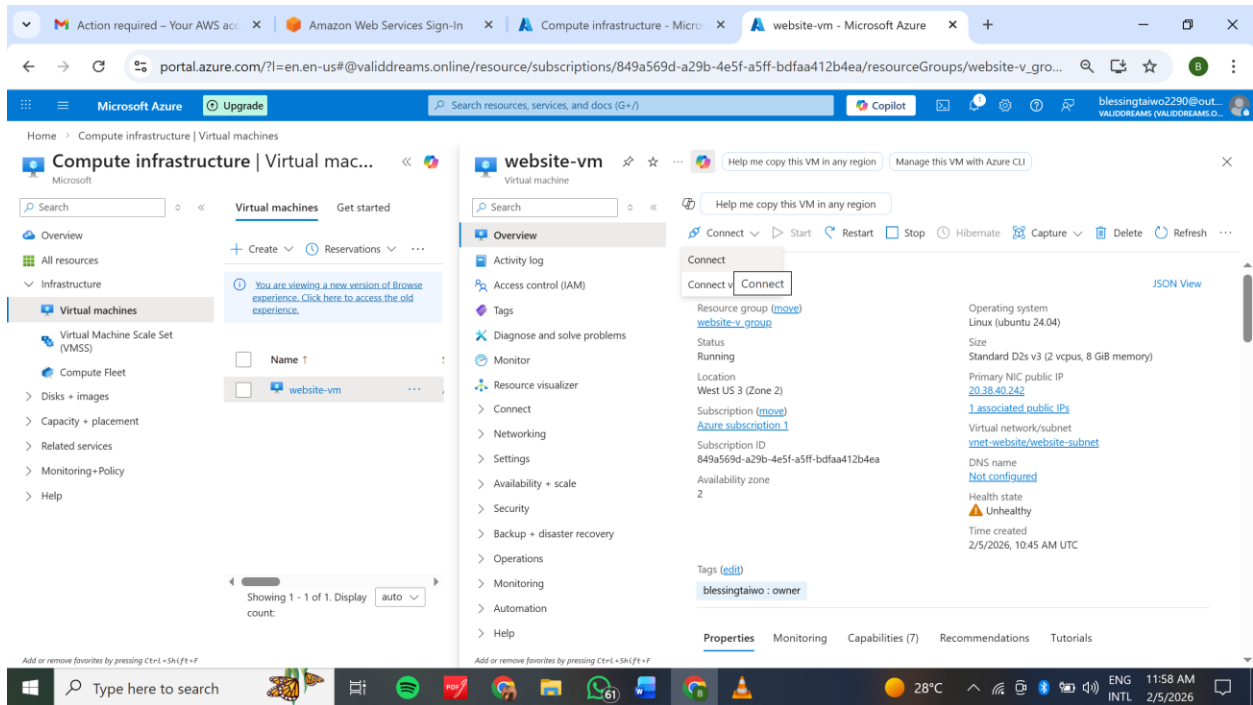

Step 8: Fill in the necessary information in the tags section, fill in the owners tag information and then move on to review and create.

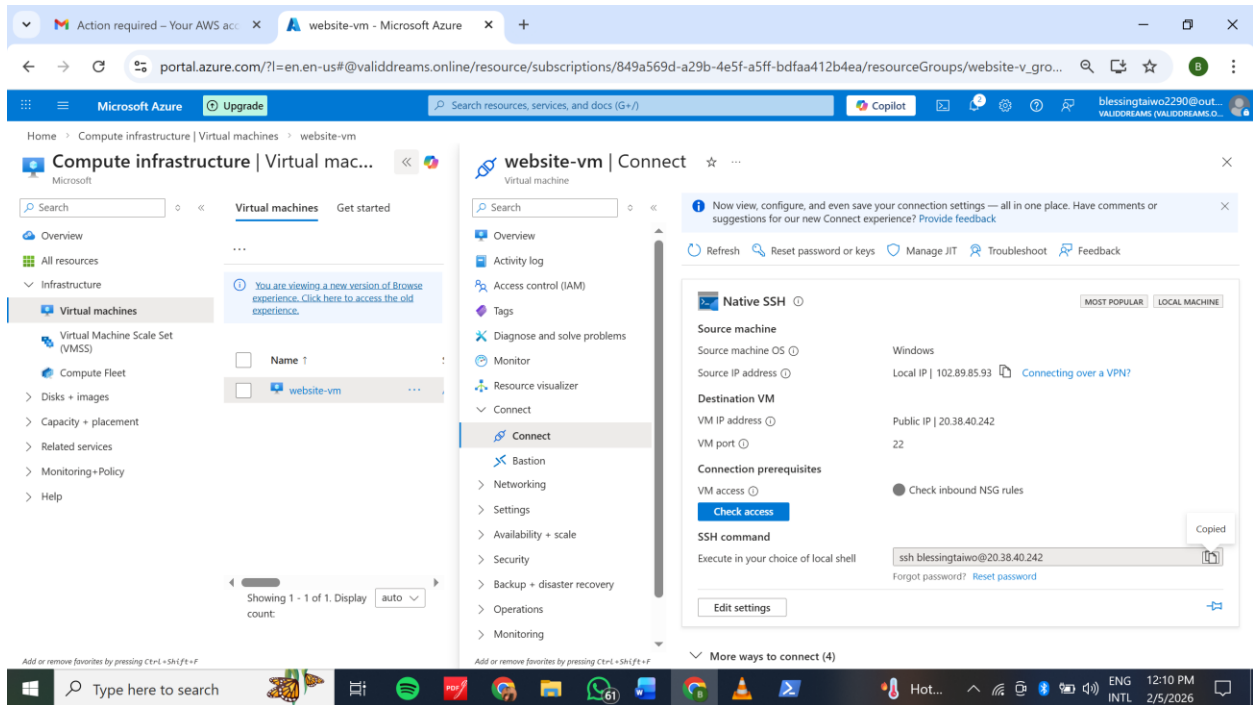

Step10: Click on create after validation passed. congratulations, you have created a virtual machine

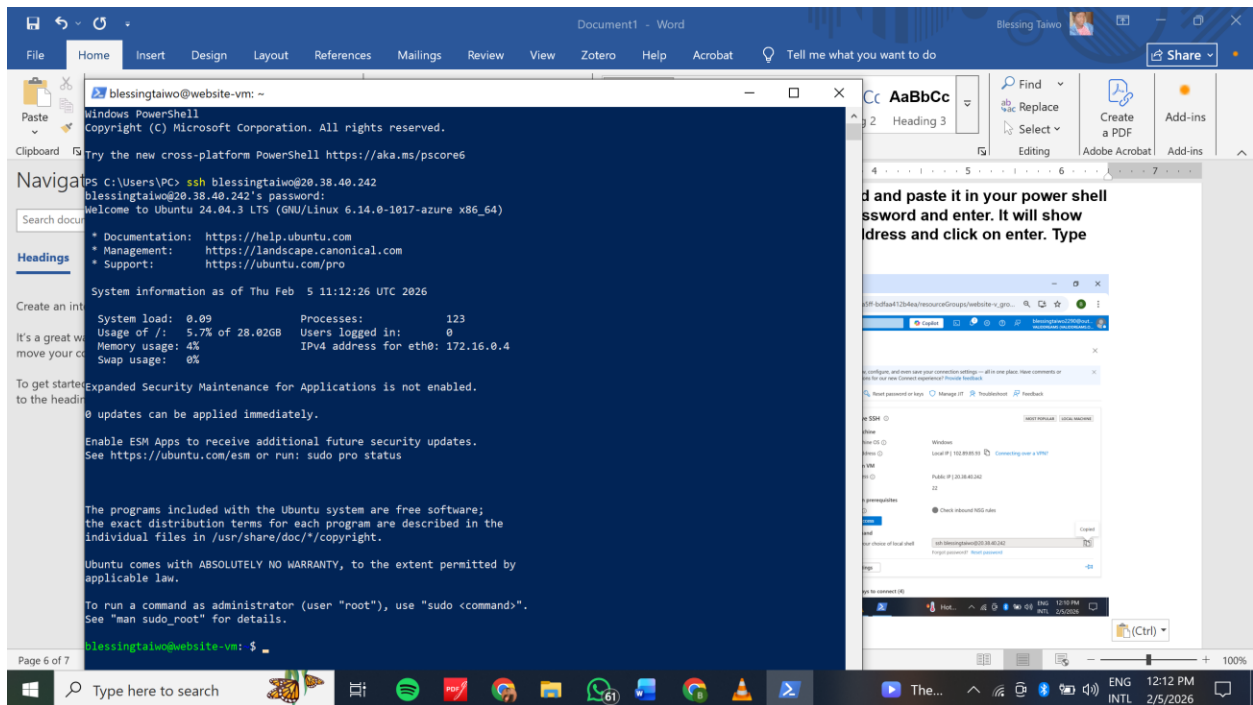

Step11: To connect ,click on connect in your virtual machine interface

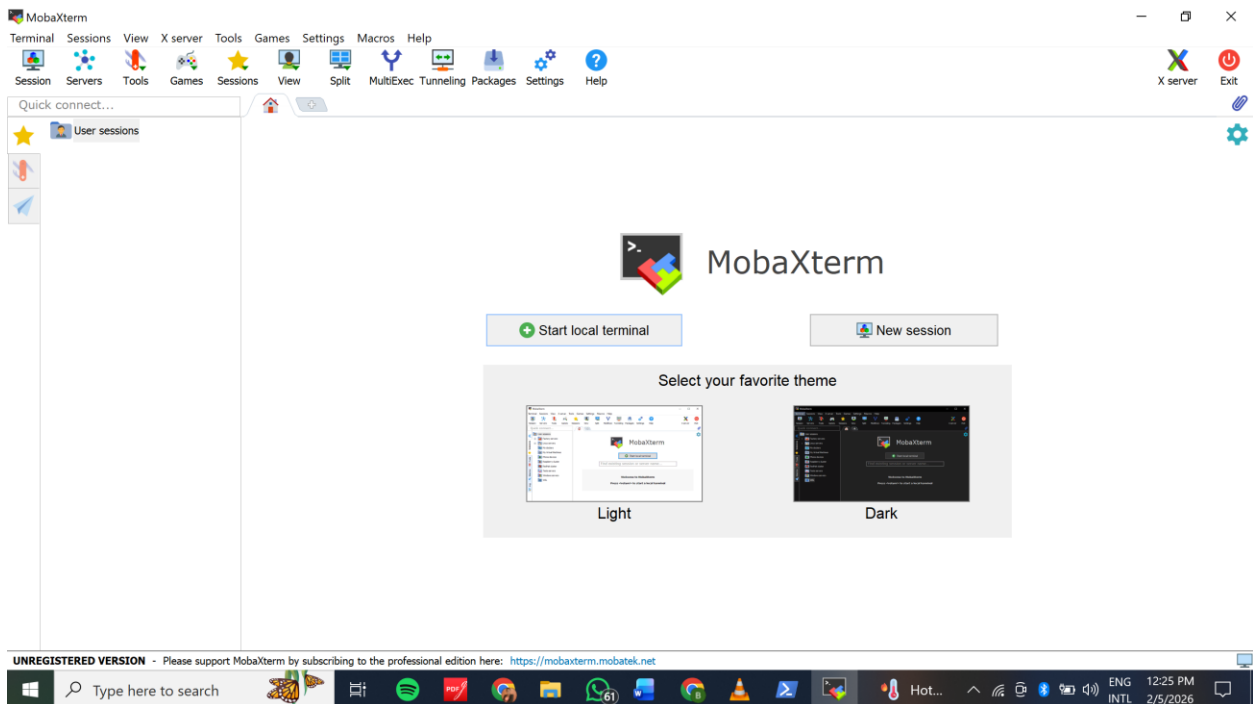

Step 12: When it opens, copy your SSH command and paste it in your power shell of your system. Click Yes, and also copy your password and enter. It will show you your virtual machine in green. Type the IP Address and click on enter. Type exit to leave the command shell.

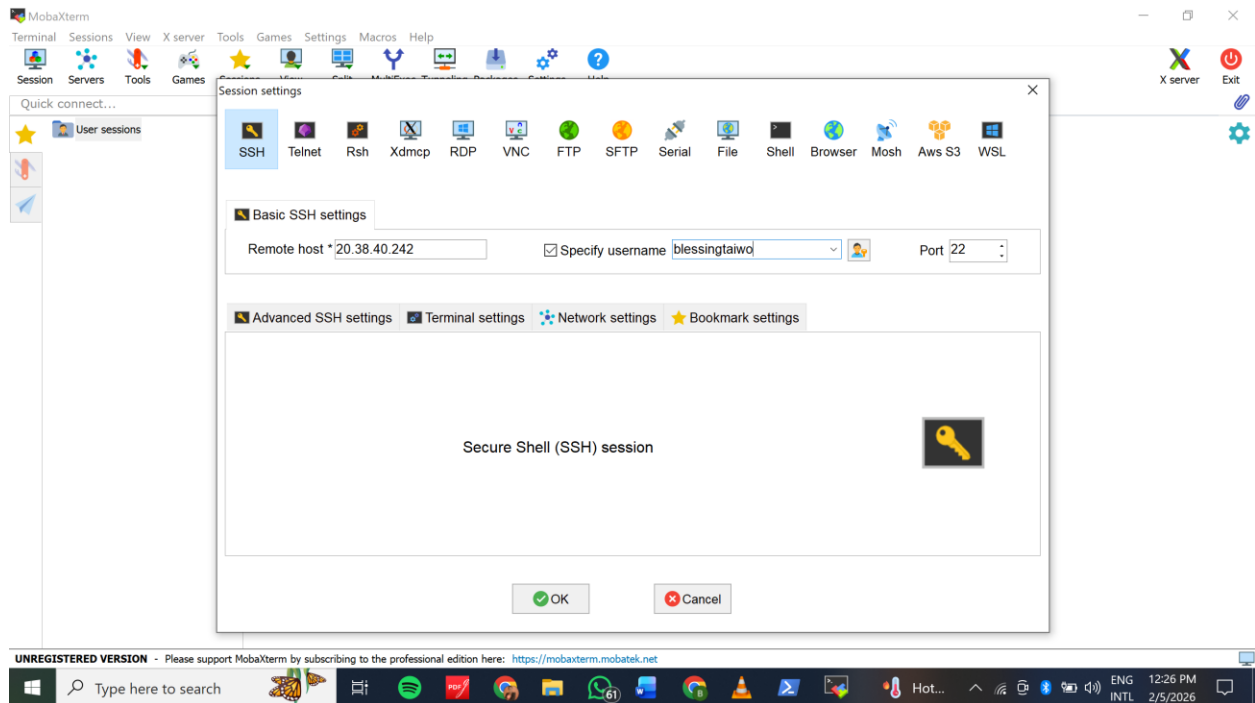

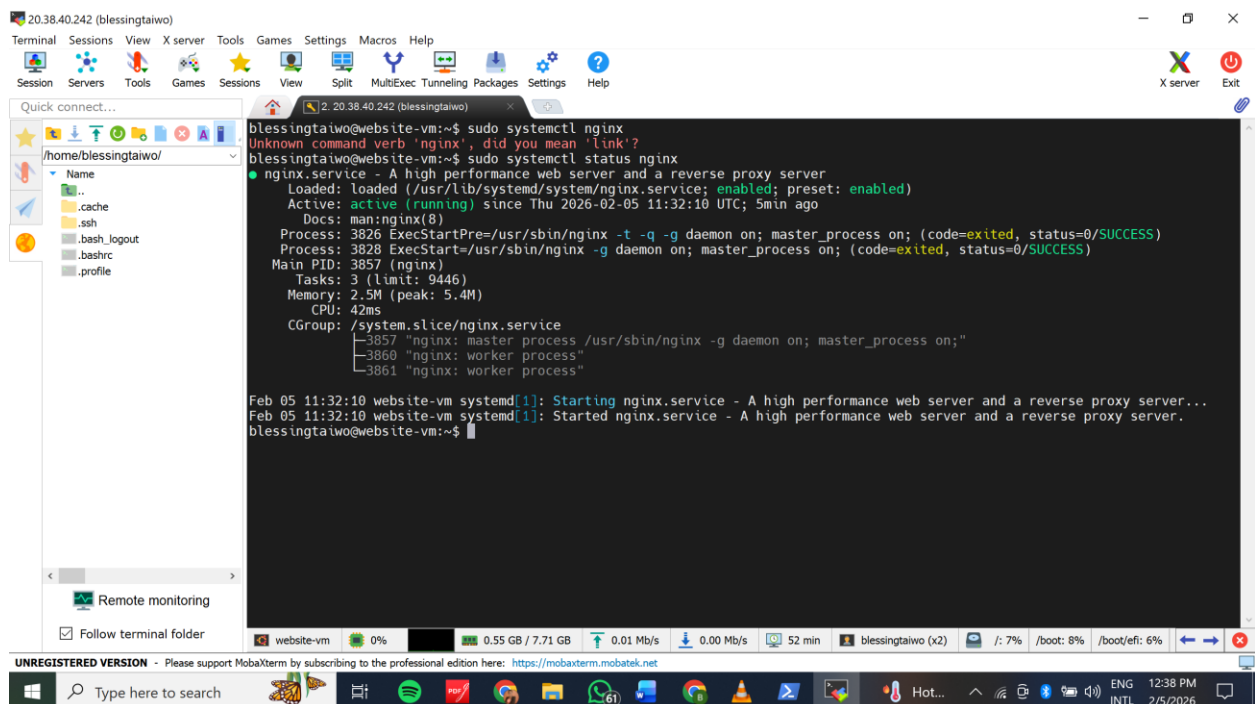

Step 14: Next, Download MobaXterm and then launch

Step 15: Click on Session, and then click on SSH. Add your Virtual Machine public IP Address, add user name and click on ok, then accept

Step 13: It will allow you in. Next, type in some configuration commands like "Update and patch", Install nginx and locate the web content folder

After installing your nginx, type the public IP of ur VM on a tab and you will see below, this shows Nginx is successfully activated.
